The time-weighted rate of return eliminates the effect of cash flows. In the case of the daily time-weighted rate of return, the portfolio will be revalued whenever a cash flow takes place therefore completely reducing its impact on the return. Returns are measured from day-to-day or cash flow to cash flow. These returns are then compounded or geometrically linked resulting in the time-weighted rate of return.

Performance returns for time periods longer than 365 days have been annualized.

Any benchmark return calculations included on this report were performed using a cash flow adjusted calculation.
